

Partial Derivatives with respect to a

Part 2

How do we compute partial derivatives

1. Let us continue calculating the partial derivative of L w.r.t w_{212}
2. Solving the equation sequentially

a. Let's look at the second partial derivative $\frac{\partial \hat{y}_1}{\partial a_{21}}$

- i. Here, $\hat{y}_1 = \left(\frac{e^{a_{21}}}{e^{a_{21}} + e^{a_{22}}} \right)$, this is the softmax applied on a_{21}
- ii. To make it easier to compute, multiply both numerator and denominator by $e^{-a_{21}}$
- iii. $\hat{y}_1 = \left(\frac{e^{-a_{21}}}{e^{-a_{21}} + e^{a_{22}-a_{21}}} \right) = \frac{1}{1 + e^{-(a_{21}-a_{22})}}$
- iv. $\frac{\partial \hat{y}_1}{\partial a_{21}} = \frac{\partial}{\partial a_{21}} \left(\frac{1}{1 + e^{-(a_{21}-a_{22})}} \right)$
- v. $\frac{\partial \hat{y}_1}{\partial a_{21}} = \left(\frac{-1}{(1 + e^{-(a_{21}-a_{22})})^2} \right) \cdot (1) \cdot (e^{-(a_{21}-a_{22})}) \cdot (-1) = \left(\frac{1}{1 + e^{-(a_{21}-a_{22})}} \right) \cdot \left(\frac{e^{-(a_{21}-a_{22})}}{1 + e^{-(a_{21}-a_{22})}} \right)$
- vi. Rewriting the terms $\frac{\partial \hat{y}_1}{\partial a_{21}} = \hat{y}_1(1 - \hat{y}_1)$
